HACK APERTUS 2026 · TRACK 1B SWISS VOICES

Inkraft

The law is the answer key.

A trilingual benchmark (DE · FR · IT) for Swiss social and health insurance law. Every gold answer rests on evidence quoted word for word from fedlex, valid on 1 October 2026.

THE PROBLEM

Same question. Two confident answers.

ASKED TO AN AI ASSISTANT

How much is the minimum full AHV old-age pension per month?

PREVIOUS RULE

~~CHF 1,225~~

Correct until 31 Dec 2024.

IN FORCE

CHF 1,260

Since 1 Jan 2025 · Art. 34 para. 5 AHVG

Social insurance law changes on fixed dates. A model doesn't know which version it learned.

WHO ASKS

Residents

Living in Switzerland means compulsory KVG and AHV cover.

Medical practice assistants

Franchise, billing, deadlines at the front desk.

Municipal AHV branch offices

Generalists who answer pension and benefit questions.

THE INSIGHT

The answer is already written down. In three languages.

DE AHVG Art. 34 Abs. 5

«Der Mindestbetrag der vollen Altersrente von **1260 Franken** entspricht dem Rentenindex von 229,1 Punkten.»

FR LAVS art. 34 al. 5

«Le montant minimal de la rente de vieillesse complète de **1260 francs** correspond à un indice des rentes de 229,1 points.»

IT LAVS art. 34 cpv. 5

«L'importo minimo della rendita completa di vecchiaia di **1260 franchi** corrisponde a un indice delle rendite di 229,1 punti.»

Art. 14 para. 1 PublG

«Bei Erlassen sind die drei Fassungen in gleicher Weise verbindlich.»

All three language versions of an act are equally binding. So each language gets its gold answer from its own authentic text, never from a translation.

WHAT INKRAFT MEASURES

A wrong answer is not always invented.

CORRECT

CHF 1,260

The rule in force on the as-of date, 1 Oct 2026.

`gold, quoted from fedlex`

STALE

CHF 1,225

Was the law until the last amendment. Inkraft stores the previous rule and its fedlex version.

`outdated_answers`

INVENTED

CHF 1,300

Example: an amount in no version of the law. A hallucination.

`any other answer`

NOT ATTEMPTED

“I'm not sure.”

Honest. Scored apart from wrong answers, as in SimpleQA.

`abstention`

Stale is not invented. Inkraft tells them apart.

THE DATASET

Built from the statute book.

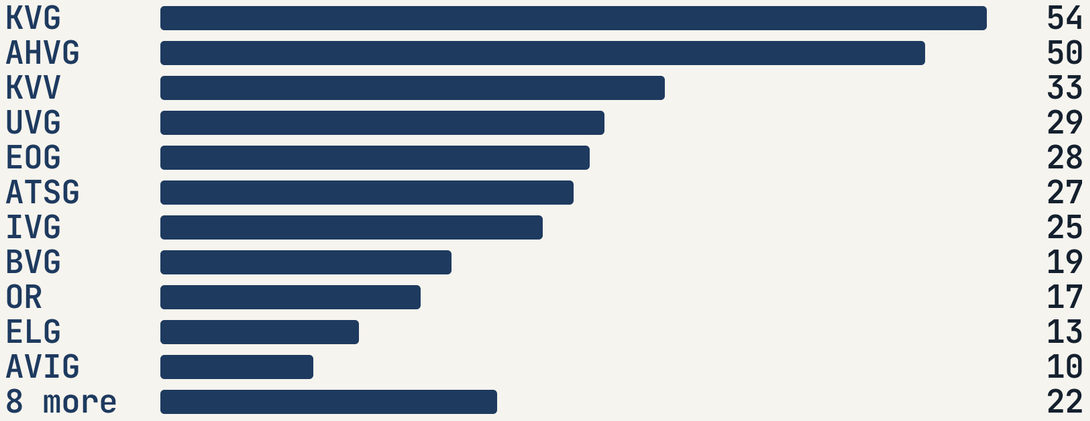

327
core questions in German

951
rows across DE · FR · IT

312
cores in all three languages

53
cores with the previous rule stored as stale answer

CORE QUESTIONS PER FEDERAL LAW

CITED SENTENCE LAST AMENDED

- before 2024
- in 2024 or 2025
- in 2026

951 / 951 rows pass the source check: the evidence appears word for word in the cited fedlex paragraph, in the row's own language.

Release v1.0.0-rc1. All cores are LLM drafts (98 GPT-5.5 via Codex, 97 Claude, 86 Gemini, 46 Nemotron 3 Ultra), checked against fedlex, by a second model and by a human on a random sample of 35 cores ([[NIKLAS-PRÜFUNG: human_drops]] rejected and removed).

EVALUATION

Graded like SimpleQA. Checked by a human.

1 · RULES

Numbers and dates first

Amounts, deadlines and dates are extracted and matched against gold and the stale answer.

2 · JUDGE PANEL

3 open-weight judges, majority

Qwen3-235B-A22B-2507 · GLM-5.3 · DeepSeek V3.2, each calibrated on 61 cases. Grades: correct · stale · near miss · other · not attempted.

3 · HUMAN

22 % blind sample

Graded without seeing the judges. Cohen's κ [[NIKLAS-PRÜFUNG: kappa_qwen]] vs the first judge, [[NIKLAS-PRÜFUNG: kappa_panel]] vs the panel majority.

APERTUS 1.5	CORRECT DE · FR · IT	RULE CHANGED, OLD ANSWER STORED: CORRECT · OLD RULE GIVEN	NOT ATTEMPTED	EFFECT OF THE DATE IN THE PROMPT
8B	34 · 34 · 31 %	8 / 157 · 22 / 157	11.6 %	−1.5 pts (p = 0.27)
70B	53 · 50 · 48 %	11 / 157 · 47 / 157	1.2 %	−0.3 pts (p = 1.0)

Release v1.0.0-rc1, 951 rows, majority of 3 judges.
Overall correct: 8B 33.0 %, 70B 50.7 %. **Open book** (law paragraph in the prompt): 70B right in 98.7 % of the 157 stale-pair rows. Date effect on the 327 German rows.

CONTAMINATION CHECK

Did Apertus see this law? We check its legal training corpus.

Apertus publishes its training catalogue. For v1.5 it lists Swiss legislation:

`Multi_Legal_Pile · switzerland_lexfind`

For every item we look up the cited paragraph in that corpus and check which version of the rule it contains.

Leak check: 55 of 951 questions share a 13-gram with the corpus (statutory phrasing; the questions are new).

	70B
Current rule in that corpus seen and still valid · 564 rows	64 %
Previous rule in that corpus seen, then amended · 84 rows	11 %
Not in that corpus not found there · 277 rows	38 %

In the corpus but not learned, or not in it? Now we can tell.

REPRODUCIBILITY

One command. Scoring replayed.

```
Replay · no keys, no GPU
recomputes 8 result blocks from 5,112 stored
answers and grades, checks expected results PASS
dataset release v1.0.0-rc1
```

```
Full mode
grades any OpenAI-compatible model
Commands: technical docs in the README
```

`test.jsonl`	questions and gold
`metadata.jsonl`	fedlex ELI with version date
`responses/`	every model answer · 5,112
`judgements/`	every grade · 3 judges + majority
`human_labels/`	22 % sample · κ

INKRAFT · TRACK 1B SWISS VOICES

The law is the answer key.

Before a model answers citizens on AHV or KVG, run it on Inkraft: one command tells you how often it is right, stale or inventing.
