HACK APERTUS 2026 · TRACK 1B SWISS VOICES

Inkraft

The law is the answer key.

A trilingual benchmark (DE · FR · IT) for Swiss social and health insurance law. Every gold answer is quoted from fedlex, valid on 1 October 2026.

Technical report (PDF) → | **Project page →**

Team Apertool · solo builder · Core Task Intelligence

THE PROBLEM

Same question. Two confident answers.

ASKED TO AN AI ASSISTANT

How much is the minimum full AHV old-age pension per month?

PREVIOUS RULE

~~CHF 1,225~~

Correct until 31 Dec 2024.

IN FORCE

CHF 1,260

Since 1 Jan 2025 · Art. 34 para. 5 AHVG

Social insurance law changes on fixed dates. A model doesn't know which version it learned.

WHO ASKS

Residents

Living in Switzerland means compulsory KVG and AHV cover.

Medical practice assistants

Franchise, billing, deadlines at the front desk.

Municipal AHV branch offices

Generalists who answer pension and benefit questions.

THE INSIGHT

The answer is already written down. In three languages.

DE AHVG Art. 34 Abs. 5

«Der Mindestbetrag der vollen Altersrente von **1260 Franken** entspricht dem Rentenindex von 229,1 Punkten.»

FR LAVS art. 34 al. 5

«Le montant minimal de la rente de vieillesse complète de **1260 francs** correspond à un indice des rentes de 229,1 points.»

IT LAVS art. 34 cpv. 5

«L'importo minimo della rendita completa di vecchiaia di **1260 franchi** corrisponde a un indice delle rendite di 229,1 punti.»

Art. 14 para. 1 PublG

«Bei Erlassen sind die drei Fassungen in gleicher Weise verbindlich.»

All three language versions of an act are equally binding. So each language gets its gold answer from its own authentic text, never from a translation.

WHAT INKRAFT MEASURES

A wrong answer is not always invented.

CORRECT

CHF 1,260

The rule in force on the as-of date, 1 Oct 2026.

`gold, quoted from fedlex`

STALE

CHF 1,225

Was the law until the last amendment. Inkraft stores the previous rule and its fedlex version.

`outdated_answers`

INVENTED

CHF 1,300

Example: an amount in no version of the law. A hallucination.

`any other answer`

NOT ATTEMPTED

“I'm not sure.”

Honest. Scored apart from wrong answers, as in SimpleQA.

`abstention`

Stale is not invented. Inkraft tells them apart.

THE DATASET

Built from the statute book.

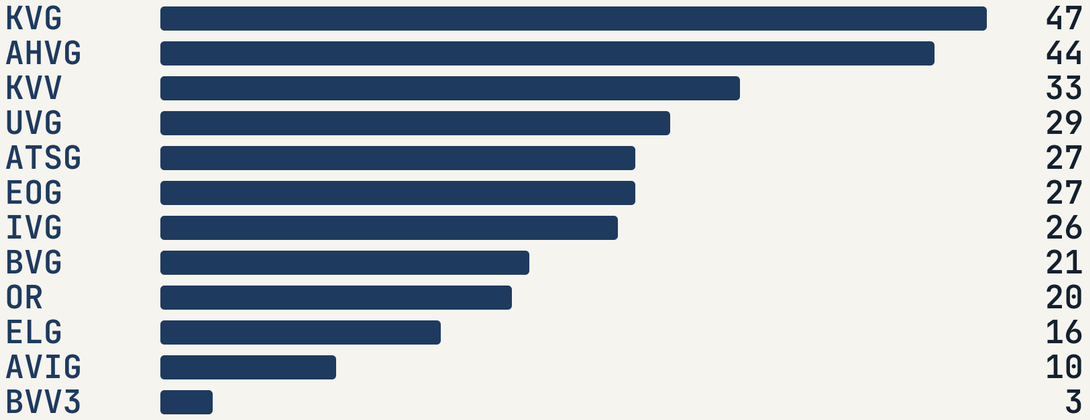

303
core questions in German

879
rows across DE · FR · IT

288
cores in all three languages

16
temporal items with the previous answer stored

CORE QUESTIONS PER FEDERAL LAW

CITED ARTICLE LAST AMENDED

- before 2024
- in 2024 or 2025
- in 2026

> **879 / 879** rows pass the source check: the evidence appears word for word in the cited fedlex paragraph, in the row's own language.

Status 4 Oct 2026: draft, not frozen. All cores are LLM drafts (105 Claude, 103 GPT-5.5 via Codex, 95 Gemini 3.8 Flash via Antigravity); 0 % hand-written, human review pending. `Final counts with v1.0.0 (freeze planned 12 Oct)`

EVALUATION

Graded like SimpleQA. Checked by a human.

1 · RULES

Numbers and dates first

Amounts, deadlines and dates are extracted and matched against gold and the stale answer.

2 · LLM JUDGE

A different model family

Judge Qwen3-235B `(planned)` grades correct · stale · near miss · other · not attempted.

3 · HUMAN

20 % blind sample

Graded without seeing the judge. Agreement as Cohen's κ, `reported with v1.0.0`

APERTUS 1.5 PRELIMINARY*	CORRECT DE · FR · IT	RULE CHANGED SINCE 2024: CORRECT · OLD RULE GIVEN	NOT ATTEMPTED	EFFECT OF THE DATE IN THE PROMPT
8B	36 · 35 · 33 %	3 / 48 · 6 / 48	6.4 %	+0.8 pts (p = 0.35)
70B	55 · 53 · 48 %	5 / 48 · 16 / 48	0.5 %	±0 pts (p = 1.0)

`* Preliminary: unreviewed draft (879 rows), rule-based grading only, no judge, 21–25 % undecided; final results after the freeze.`

Conditions: as-of date in the system prompt (main) · plain question · law paragraph in the prompt (open book) to separate a knowledge gap from a reading error.

Published: every answer, every grade and the human labels.

CONTAMINATION CHECK

Did Apertus see this law? We check its own training data.

Apertus publishes its training catalogue. For v1.5 it lists Swiss legislation:

`Multi_Legal_Pile · switzerland_lexfind`

For every item we look up the cited paragraph in that corpus and check which version of the rule it contains.

Leak check: 52 of 879 questions share a 13-gram with the corpus (statutory phrasing; the questions are new).

Current rule in training data — 70B, PRELIM. — 57 %
seen and still valid · 602 rows

Previous rule in training data — 70B, PRELIM. — 19 %
seen, then amended · 26 rows

Not in training data — 70B, PRELIM. — 43 %
never seen there · 232 rows

Seen but not learned, or never seen? Now we can tell.

REPRODUCIBILITY

One command. Every number recomputed.

```
$ make run
# replay: no keys, no GPU
# recomputes every metric from stored answers
# and checks it against expected_results.json
PASS
```

```
$ make run MODE=full \
  LLM_BASE_URL=… LLM_NAME=…
# grades any OpenAI-compatible model
```

`test.jsonl`	questions and gold
`metadata.jsonl`	fedlex ELI with version date
`responses/`	every model answer
`judgements/`	every grade
`human_labels/`	the 20 % sample
